

OVERVIEW

You've been provided with a **3D Bentley Open Buildings Designer Model** and visualisation of an underground tube station.

You also have a **budget template** to work to, and a **sustainability and accessibility code** which must be strictly followed.

Your mission is to transform the tube station into a hotel with a community space for celebrity client, James Bond. Use the space available above and below ground to create an iconic, signature building.

The building should include accommodation, services, luxury provision (e.g. a health spa), public spaces, restaurants and bar(s) and any other facilities your team think is appropriate.

Certain roles and responsibilities should be assigned to team members, and in smaller teams, members may need to 'double up'.

You will be using:
